

RESOURCEFUL. RESPONSIBLE.

Taking environmental responsibility seriously

www.macroofing.com

Maximum Performance. Minimal Impact.

At MAC we don't just install high performance roofing and waterproofing systems. We create living and working spaces for people to enjoy, making a positive difference to the occupants of buildings and local communities.

From the cars and vans that we drive, to the products we order and the installation methods we adopt, MAC Roofing is committed to achieving the highest levels of environmental sustainability.

Our employees embrace a process of continual assessment and improvement in this area and we choose to work with like-minded supply chain partners who share our commitment to environmental responsibility.

We also take our ecological responsibilities seriously and recognise that the environmental performance of a building can be as crucial as the other functions it fulfils. We acknowledge the fragile nature of the global environment in which we operate and take steps to minimise all harmful aspects of our activities on it.

As a sign of our commitment, MAC has implemented an Environmental Management System throughout its operations which fully meets the demands of BS EN ISO 14001:2015.

Through this Internationally recognised Management System, we carefully address our use of energy and raw materials, setting challenging targets and objectives in order to minimise our impact on the environment. These targets are regularly reviewed with an ongoing commitment to continual improvement.

We seek to reduce the creation, emission and discharge of any type of pollutants during our operations. We acknowledge that it is the responsibility of all employees, suitably trained, to work together to achieve these objectives and minimise all adverse effects.

On MAC projects we utilise the most sustainable products and installation techniques available and operate stringent quality control and working procedures to minimise waste of materials and energy during site installations.

Within our portfolio is a variety of roofing and waterproofing systems that can help meet increasingly stringent legislative and environmental requirements:

- Intensive & extensive green roof systems
- Biodiverse roofs
- Blue roof rainwater attenuation systems
- Thermally efficient insulation
- Photovoltaic energy roof systems
- CO₂ reducing roofing materials
- BRE Green Guide rated systems

MAC Roofing is committed to the protection of the environment, prevention of pollution and sustainable development. We regularly assess the environmental effects of all our products, projects, policies and operations with the aim of minimising and controlling any environmental impacts now and in the future.
